

## Appendix L

# Well-Record Result Data Set

The data listing the API number for the wells considered in the well record search are provided in both Excel and tab-delimited text format. These wells have a first production date between 2002 and near the end of 2013, or a first injection date if no first production date, which is also listed, along with the basin, county, field, and area where that well is located, and the pool it was open to on that date. Whether the record for a well was searched, if the record indicated hydraulic fracturing occurred, and if the hydraulic fracturing consisted of a frac-pack is also listed.

The first production and injection date source file provided by the California Department of Oil, Gas, and Geothermal Resources has more than one record for some wells. The start dates are specific to the combination of a well and pool, so if a well is recompleted in a new pool it will have an additional start date. The data in this appendix include only the first occurrence of a well's production and injection dates, and the pool for that date. The full data can be found at <http://ccst.us/publications/WST>.
